

MY ENTERPRISE SECURITY INTELLIGENCE:

Pakistan's First SBOM Driven
Vulnerability Intelligence Platform

Welcome to the future of software security. myESI by iSeeWaves introduces Pakistan's first SBOM-driven Enterprise Security Intelligence platform enabling organizations to secure software with transparency, automation, and real-time vulnerability intelligence.

Understanding SBOM (Software Bill Of Material)

Transparency

You know exactly what your software contains

Traceability

Every component can be tracked for vulnerabilities, patches & supply-chain risks

An SBOM is like a digital inventory sheet of your entire software making hidden components visible, enabling teams to understand risk exposure, detect vulnerable packages faster, and strengthen software supply chain security with data-driven accuracy.

iSeeWaves Pvt. Ltd.

Why Software Bill Of Material Matters?

Open-Source Dependency

Modern software relies 70%+ on external libraries which is highest attack entry point.

Impossible Security

If you don't see it, you cannot measure it and you cannot secure it.

Unknown Components

Without SBOM, you don't actually know what is inside your software stack.

iSeeWaves make it easier! myESI gives complete component visibility, real-risk scoring, and actionable vulnerability intelligence, all in one unified platform.

Why We Built myESI (My Enterprise Security Intelligence)?

Real Intelligence

Security should not be manual reporting or CSV dumping it should calculate real measurable impact.

No Guesswork

Not random CVE lookup. Not blind scanning. Evidence-based risk scoring.

Actionable Compliance

Compliance + vulnerability correlation should be automated in one click not a 2-week audit cycle.

myESI Core Features

In modern software security, visibility is power. myESI unifies analysis, scoring, compliance and governance into one intelligent workflow driven by SBOM.

SBOM Intelligence

Vulnerability Radar

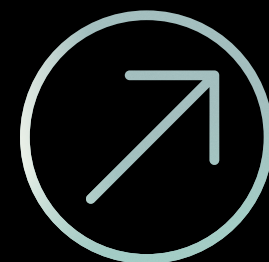

Risk Score Engine

Compliance Reporting

Subscription Governance

All inside one centralized platform built for hyper-speed security decision making. myESI makes vulnerability intelligence not just detectable but predictable.

The Future of Secure Software

Full Project Scan

Complete analysis of entire software, not only manifests.

Automated Intelligence

One-click scanning, continuous risk evaluation.

Zero Code Exposure

No human access to user source code. Privacy by design.

myESI is redefining how security is done with trust-first architecture, next-gen SBOM processing and automated vulnerability intelligence built for modern enterprises.

Where Pakistan Steps Into the Future of Global Cyber Defense

Vision

We are building global-grade vulnerability intelligence products, not just tools. Pakistan can lead in secure software innovation.

Automation

myESI is our first milestone toward this vision, SBOM driven, automated, measurable, intelligence-powered security.
